

One-ton Model

A practical way to inhibit plant diseases in organic farming

- Generate electrons & ionized particles in water
- Reduce the use of chemical fertilizer
- Reduce the need of pesticides
- Promote plants growing
- Improve overall farming efficiency

AgriKit

A multi-fuctional farm tool for irrigation water quality management.

- Disinfect viruses & bacteria
- Exterminate mildew & fungus
- Remove heavy metal ions
- Degrade harmful chemicals

AgriKit converts irrigating water into ionized forms, containing:

- Hydroxide ion (OH)
- Copper ion (Cu)
- Ionized nutrients

Landscape Pool

Periodical cleaning can reduce molds, algae, larvae and dusts. This prolongs the need of water replacement.

AgriKit technology is:

- Environmentally friendly
- Cost effective
- Easy to operate

GETC (Greenguard Ecological Technologies Company)
